Vasko Drogriski

June 12, 2015

This week I posted a link to Jeremy Griffiths book Freedom, the end of the human condition, having bumped into it coincidentally on Michael Leunigs page.

It caught my attention, and since then have followed it up a bit, to find out more about it.

I don't know if others are aware of Jeremy Griffiths work, I wasn't till this week.

He is an Australian biologist and has just released this book which appears to be getting some controversial reviews, on the one hand being **hailed as the 'holy grail' in human/biological/psychological understanding of the 'human condition' being held up as 'the' long awaited answer and the most important information to emerge about humans on earth.**

**So when one comes across hefty claims like these, obviously one is intrigued.** Having watched some of the interviews and read parts of the book it does appear to throw up a view of humans I have not heard before, but then again I'm no evolutionary biologist, but I have been around long enough to have heard a few different ideas from various people, to know when I'm hearing something 'unusual'.

Whether it is what it is claimed to be or not, is unknown to me, but it does sound like a radically different narrative.

Here it is. Have a look and see what you think yourself.

For those wanting to know in essence what it's about, it is the proposition that the 'human condition' as we witness it today in the world, was brought about by the ensuing battle between our consciousness development, our central nervous systems development of understanding of the real world, and our instinctive learning past. Our Ego, anger and upset is from the criticism, persecution of our consciousness by our instinct.

**This is a radically new insight about this phenomenon.**

## FREEDOM: The End Of The Human Condition

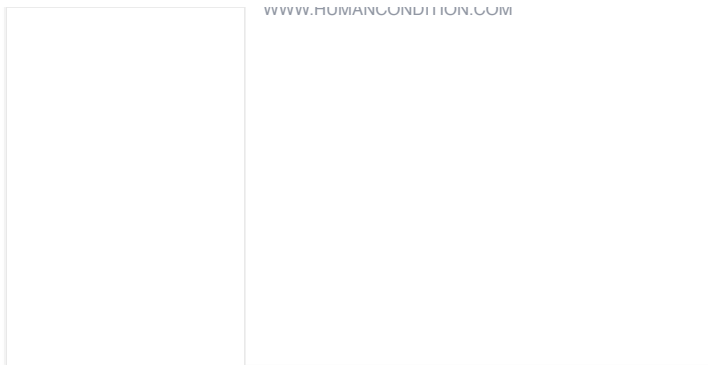

This book by Australian biologist Jeremy Griffith presents the 11th hour breakthrough biological explanation of the human condition needed for the psychological rehabilitation of the human race!—"The Book That Saves The World"

Tess Watson, Sally Burdziejko and 2 others like this.

**Amanda Marler** no time to read the whole book. - Any chance of directing me to a few core vital chapters

**Vasko Drogriski** If you open the link, there are a series of videos introductions with panel discussion which is very good introduction to the book, he talks about it. Easy way to get the intro. There are also summaries of each chapter on their FB page.

**Amanda Marler** Did reading it inspire you and free you up? Briefly read the brief description. Have been more inspired by other authors on freedom from ourselves, but his perspective sounds valid and If it helps people to stop crucifying themselves and suddenly drop into self-love / freedom from (unconscious) crippling guilt, terrific. From reading it, do you feel freed up and if so how will you hold it there?

**Vasko Drogriski** It gave me a very different insight to many things. If true, this is a radically different scientific narrative.

**Vasko Drogriski** **ididnt see it as a type of 'woo woo' feel good notion of human compassion,** confirming things like the 'goodness' of humans, or that we should feel assured that we're essentially ok, **it goes deeper into the guts of nature. There is also an interesting chapter on our struggle to understand, or to deny, the essential 'ordering of matter in nature', this is no 'woo woo' inquiry into things, but questioning the essential scientific worldview we have not just about ourselves, but of the actual nature of matter and how things come to being in the universe.**

**Vasko Drogriski** **whats radically different about this, is that it makes an explicit link between biological-psychological evolution, particularly insincts vs conscious thinking, and the answer it gives is radically different to anything so far. This idea or explanation has not been given so far, it is new. Although there have been many discussions about instinct vs conscious thought trying to understand them, the level of clarity about this has yet not be proposed this way.**

**Amanda Marler** okay, your comment before made it sound more intriguing - "our struggle to understand, or to deny, the essential 'ordering of matter in nature' ... questioning the essential scientific worldview we have not just about ourselves, but of the actual nature of matter." The "instincts vs conscious thinking" reminded me of Freud (instincts/id, ego and superego) but the denying of the 'ordering of matter in nature' sounds different. Will take another look (nother time).

**Vasko Drogriski** i have ordered his book and want to read for myself. His ideas sound extremely unusual, they don't have the same 'resonance' as the type of information we're used to hearing.
